Data notice
This is the data used for all behavioral analysis and regression models.
Missed trials removed.

Choice_yee = Choices of the Employee (Subject in the Scanner)
Choice_yer = Choices of the Employer (Opponent in adjacent room)

Employee
1 = Shirk
0 = Work

Employer
1 = Inspect
0 = Not Inspect

Data used in Matlab begins with the prefix "fMRI_pair"
Data used for computational modeling in rJAGS uses the prefix "JAGS"
JAGS data is a matrix truncated so that all choices vectors are the same length for hierarchical modeling.
